The gardens at Wolf Trap support and encourage biodiversity. They enhance the efficient use of rainwater, create habitat for pollinators, birds and other animals and insects.

Green Spring Master Gardeners & Naturalists help maintain and support the multiple gardens at Wolf Trap. The gardens support biodiversity and prevent erosion while promoting native plant species.

**Woodland Shade Garden**
Located at the bottom of the hill, behind the Filene Center. This shade garden landscape, with a variety of plants and trees, is centered around a small woodland stream.
This neglected little stream at the AT&T site awaits its own opportunity to be transformed into the center of a charming Woodland Shade Garden. It can be a treasured refuge for both Nature and residents.
